# Flexible Termination System (FT-CAP), COG Dielectric, 10 – 250 VDC (Commercial & Automotive Grade)

#### Overview

KEMET's Flexible Termination (FT-CAP) Multilayer Ceramic Capacitor in COG dielectric incorporates a unique, flexible termination system that is integrated with KEMET's standard termination materials. A conductive silver epoxy is utilized between the base metal and nickel barrier layers of KEMET's standard termination system in order to establish pliability while maintaining terminal strength, solderability and electrical performance. This technology was developed in order to address the primary failure mode of MLCCs- flex cracks, which are typically the result of excessive tensile and shear stresses produced during board flexure and thermal cycling. Flexible termination technology inhibits the transfer of board stress to the rigid ceramic body, therefore mitigating flex cracks which can result in low IR or short circuit failures.

Although this technology does not eliminate the potential for mechanical damage that may propagate during extreme environmental and handling conditions, it does provide superior flex performance over standard termination systems. FT-CAP complements KEMET's Open Mode, Floating Electrode (FE-CAP), Floating Electrode with Flexible Termination (FF-CAP), and KEMET Power Solutions (KPS) product lines by providing a complete portfolio of flex mitigation solutions.

Combined with the stability of COG dielectric and designed to accommodate all capacitance requirements, these flex-robust devices are RoHS Compliant, offer up to 5 mm of flex-bend capability and exhibit no change in capacitance with respect to time and voltage. Capacitance change with reference to ambient temperature is limited to ±30 ppm/°C from -55°C to +125°C.

In addition to Commercial Grade, Automotive Grade devices are available which meet the demanding Automotive Electronics Council's AEC-Q200 qualification requirements.

# **Ordering Information**

С	1206	X	563	J	3	G	A	C	TU
Ceramic	Case Size (L" x W")	Specification/ Series	Capacitance Code (pF)	Capacitance Tolerance <sup>1</sup>	Rated Voltage (VDC)	Dielectric	Failure Rate/ Design	Termination Finish <sup>2</sup>	Packaging/ Grade (C-Spec)
	0603 0805 1206 1210 1812 1825 2220 2225	X = Flexible Termination	Two significant digits and number of zeros. Use 9 for 1.0 – 9.9 pF Use 8 for 0.5 – .99 pF e.g., 2.2 pF = 229 e.g., 0.5 pF = 508	B = ±0.10 pF C = ±0.25 pF D = ±0.5 pF F = ±1% G = ±2% J = ±5% K = ±10% M = ±20%	8 = 10 4 = 16 3 = 25 5 = 50 1 = 100 2 = 200 A = 250	G = COG	A = N/A	C = 100% Matte Sn L = SnPb (5% Pb minimum)	See "Packaging C-Spec Ordering Options Table"

<sup>&</sup>lt;sup>1</sup> Additional capacitance tolerance offerings may be available. Contact KEMET for details.

<sup>&</sup>lt;sup>2</sup> Additional termination finish options may be available. Contact KEMET for details.

## **Packaging C-Spec Ordering Options Table**

Packaging Type <sup>1</sup>	Packaging/Grade Ordering Code (C-Spec)
Commerc	ial Grade <sup>1</sup>
Bulk Bag	Not required (Blank)
7" Reel/Unmarked	TU
13" Reel/Unmarked	7411 (EIA 0603 and smaller case sizes) 7210 (EIA 0805 and larger case sizes)
7" Reel/Unmarked/2mm pitch <sup>2</sup>	7081
13" Reel/Unmarked/2mm pitch <sup>2</sup>	7082
Automoti	ve Grade <sup>3</sup>
7" Reel	AUTO
13" Reel/Unmarked	AUTO7411 (EIA 0603 and smaller case sizes) AUTO7210 (EIA 0805 and larger case sizes)
7" Reel/Unmarked/2mm pitch <sup>2</sup>	3190
13" Reel/Unmarked/2mm pitch <sup>2</sup>	3191

<sup>&</sup>lt;sup>1</sup> Default packaging is "Bulk Bag". An ordering code C-Spec is not required for "Bulk Bag" packaging.

#### **Benefits**

- -55°C to +125°C operating temperature range
- Superior flex performance (up to 5 mm)
- · Lead (Pb)-Free, RoHS and REACH compliant
- EIA 0603, 0805, 1206, 1210, 1812, 1825, 2220, and 2225 case sizes
- DC voltage ratings of 10 V, 16 V, 25 V, 50 V, 100 V, 200 V, and 250 V
- Capacitance offerings ranging from 0.5 pF up to 0.47 μF
- Available capacitance tolerances of ±0.10pF, ±0.25 pF, ±0.5 pF, ±1%, ±2%, ±5%, ±10%, and ±20%
- No piezoelectric noise
- · Extremely low ESR and ESL
- · High thermal stability

- · High ripple current capability
- Preferred capacitance solution at line frequencies and into the MHz range
- No capacitance change with respect to applied rated DC voltage
- Negligible capacitance change with respect to temperature from -55°C to +125°C
- Non-polar device, minimizing installation concerns
- 100% pure matte tin-plated termination finish allowing for excellent solderability
- Commercial & Automotive (AEC-Q200) Grades available
- SnPb termination finish option available upon request (5% Pb minimum)

# **Applications**

Typical applications include critical timing, tuning, circuits requiring low loss, circuits with pulse, high current, decoupling, bypass, filtering, transient voltage suppression and blocking, as well as energy storage in critical and safety relevant circuits without (integrated) current limitation, including those subject to high levels of board flexure or temperature cycling.

<sup>&</sup>lt;sup>1</sup> The terms "Marked" and "Unmarked" pertain to laser marking option of capacitors. All packaging options labeled as "Unmarked" will contain capacitors that have not been laser marked. The option to laser mark is not available on these devices. For more information see "Capacitor Marking".

<sup>&</sup>lt;sup>2</sup> The 2mm pitch option allows for double the packaging quantity of capacitors on a given reel size. This option is limited to EIA 0603 (1608 metric) case size devices. For more information regarding 2mm pitch option see "Tape & Reel Packaging Information".

<sup>&</sup>lt;sup>3</sup> Reeling tape options (Paper or Plastic) are dependent on capacitor case size (L" x W") and thickness dimension. See "Chip Thickness/Tape & Reel Packaging Quantities" and "Tape & Reel Packaging Information".

<sup>&</sup>lt;sup>3</sup> For additional Information regarding "AUTO" C-Spec options, see "Automotive C-Spec Information".

<sup>&</sup>lt;sup>3</sup> All Automotive packaging C-Specs listed exclude the option to laser mark components. The option to laser mark is not available on these devices. For more information see "Capacitor Marking".

#### **Automotive C-Spec Information**

KEMET automotive grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. These products are supported by a Product Change Notification (PCN) and Production Part Approval Process warrant (PPAP).

Automotive products offered through our distribution channel have been assigned an inclusive ordering code C-Spec, "AUTO." This C-Spec was developed in order to better serve small and medium-sized companies that prefer an automotive grade component without the requirement to submit a customer Source Controlled Drawing (SCD) or specification for review by a KEMET engineering specialist. This C-Spec is therefore not intended for use by KEMET OEM automotive customers and are not granted the same "privileges" as other automotive C-Specs. Customer PCN approval and PPAP request levels are limited (see details below.)

#### **Product Change Notification (PCN)**

The KEMET product change notification system is used to communicate primarily the following types of changes:

- Product/process changes that affect product form, fit, function, and/or reliability
- · Changes in manufacturing site
- Product obsolescence

KEMET Automotive	Customer Notifica	tion Due To:	Days Prior To
C-Spec	Process/Product change	Obsolescence*	Implementation
KEMET assigned <sup>1</sup>	Yes (with approval and sign off)	Yes	180 days minimum
AUT0	Yes (without approval)	Yes	90 days minimum

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

#### **Production Part Approval Process (PPAP)**

The purpose of the Production Part Approval Process is:

- To ensure that supplier can meet the manufacturability and quality requirements for the purchased parts.
- To provide the evidence that all customer engineering design records and specification requirements are properly understood and fulfilled by the manufacturing organization.
- To demonstrate that the established manufacturing process has the potential to produce the part.

KEMET Automotive	1	PPAP (Product	Part Approval	Process) Leve	
C-Spec	1	2	3	4	5
KEMET assigned <sup>1</sup>	•	•	•	•	•
AUTO			0		

<sup>&</sup>lt;sup>1</sup> KEMET assigned C-Specs require the submittal of a customer SCD or customer specification for review. For additional information contact KEMET.

- Part number specific PPAP available
- Product family PPAP only

## **Dimensions - Millimeters (Inches)**

EIA Size Code	Metric Size Code	L Length	W Width	T Thickness	B Bandwidth	S Separation Minimum	Mounting Technique
0603	1608	1.60 (0.064) ±0.17 (0.007)	0.80 (0.032) ±0.15 (0.006)		0.45 (0.018) ±0.15 (0.006)	0.58 (0.023)	Colder Ways

2220	5650	5.90 (0.232) ±0.75 (0.030)	5.00 (0.197) ±0.40 (0.016)		0.70 (0.028) ±0.35 (0.014)		·
2225	5664	5.90 (0.232) ±0.75 (0.030)	6.40 (0.248) ±0.40 (0.016)		0.70 (0.028) ±0.35 (0.014)		

# **Qualification/Certification**

Commercial Grade products are subject to internal qualification. Details regarding test methods and conditions are referenced in Table 4, Performance & Reliability.

Automotive Grade products meet or exceed the requirements outlined by the Automotive Electronics Council. Details regarding test methods and conditions are referenced in document AEC-Q200, Stress Test Qualification for Passive Components. For additional information regarding the Automotive Electronics Council and AEC-Q200, please visit their website at www.aecouncil.com.

#### **Environmental Compliance**

Lead (Pb)-free, RoHS, and REACH compliant without exemptions (excluding SnPb termination finish option).

# **Electrical Parameters/Characteristics**

Item	Parameters/Characteristics
Operating Temperature Range	-55°C to +125°C
Capacitance Change with Reference to +25°C and 0 VDC Applied (TCC)	±30 ppm/°C
Aging Rate (Maximum % Capacitance Loss/Decade Hour)	0%
<sup>1</sup> Dielectric Withstanding Voltage (DWV)	250% of rated voltage (5±1 seconds and charge/discharge not exceeding 50 mA)
<sup>2</sup> Dissipation Factor (DF) Maximum Limit at 25°C	0.1%
<sup>3</sup> Insulation Resistance (IR) Limit at 25°C	1,000 megohm microfarads or 100 GΩ (Rated voltage applied for 120±5 seconds at 25°C)

<sup>&</sup>lt;sup>1</sup> DWV is the voltage a capacitor can withstand (survive) for a short period of time. It exceeds the nominal and continuous working voltage of the capacitor.

Capacitance and Dissipation Factor (DF) measured under the following conditions:

Note: When measuring capacitance it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

#### **Post Environmental Limits**

	High Temperatu	ıre Life, Biased	Humidity, Mois	ture Resistance	
Dielectric	Rated DC Voltage	Capacitance Value	Dissipation Factor (Maximum %)	Capacitance Shift	Insulation Resistance
COG	All	All	0.5	0.3% or ±0.25 pF	10% of Initial Limit

<sup>&</sup>lt;sup>2</sup> Capacitance and dissipation factor (DF) measured under the following conditions:

<sup>1</sup> MHz ±100 kHz and 1.0 Vrms ±0.2 V if capacitance ≤ 1,000 pF

<sup>1</sup> kHz ±50 Hz and 1.0 Vrms ±0.2 V if capacitance > 1,000 pF

<sup>&</sup>lt;sup>3</sup> To obtain IR limit, divide  $M\Omega$ - $\mu$ F value by the capacitance and compare to  $G\Omega$  limit. Select the lower of the two limits.

Code	Size <sup>1</sup>	Range (mm)	Paper Q	uantity¹	Plastic	C Quantity	

Package quantity based on finished chip thickness specifications.

<sup>&</sup>lt;sup>1</sup> If ordering using the 2 mm Tape and Reel pitch option, the packaging quantity outlined in the table above will be doubled. This option is limited to EIA 0603 (1608 metric) case size devices. For more information regarding 2 mm pitch option see "Tape & Reel Packaging Information".

## **Table 2B - Bulk Packaging Quantities**

Doolso	vina Tuna	Loose P	ackaging
Раска	ging Type	Bulk Bag	(default)
Packagi	ng C-Spec <sup>1</sup>	N,	/A <sup>2</sup>
Cas	e Size	Packaging Quantities (	(pieces/unit packaging)
EIA (in)	Metric (mm)	Minimum	Maximum
0402	1005		
0603	1608		
0805	2012		50,000
1206	3216		
1210	3225	1	
1808	4520	'	
1812	4532		
1825	4564		20,000
2220	5650		
2225	5664		

<sup>&</sup>lt;sup>1</sup> The "Packaging C-Spec" is a 4 to 8 digit code which identifies the packaging type and/or product grade. When ordering, the proper code must be included in the 15th through 22nd character positions of the ordering code. See "Ordering Information" section of this document for further details. Commercial Grade product ordered without a packaging C-Spec will default to our standard "Bulk Bag" packaging. Contact KEMET if you require a bulk bag packaging option for Automotive Grade products.

<sup>&</sup>lt;sup>2</sup> A packaging C-Spec (see note 1 above) is not required for "Bulk Bag" packaging (excluding Anti-Static Bulk Bag and Automotive Grade products). The 15th through 22nd character positions of the ordering code should be left blank. All product ordered without a packaging C-Spec will default to our standard "Bulk Bag" packaging.

2225	5664	2.85	2.10	6.90	8.80	7.90	2.75	1.90	6.80	7.90	7.30	2.65	1.70	6.70	7.20	7.00			

**Density Level A:** For low-density product applications. Recommended for wave solder applications and provides a wider process window for reflow solder processes. KEMET only recommends wave soldering of EIA 0603, 0805, and 1206 case sizes.

**Density Level B:** For products with a moderate level of component density. Provides a robust solder attachment condition for reflow solder processes. **Density Level C:** For high component density product applications. Before adapting the minimum land pattern variations the user should perform qualification testing based on the conditions outlined in IPC Standard 7351 (IPC-7351).

Image below based on Density Level B for an EIA 1210 case size.

# **Soldering Process**

#### **Recommended Soldering Technique:**

- Solder wave or solder reflow for EIA case sizes 0603, 0805 and 1206
- · All other EIA case sizes are limited to solder reflow only

#### **Recommended Reflow Soldering Profile:**

KEMET's families of surface mount multilayer ceramic capacitors (SMD MLCCs) are compatible with wave (single or dual), convection, IR or vapor phase reflow techniques. Preheating of these components is recommended to avoid extreme thermal stress. KEMET's recommended profile conditions for convection and IR reflow reflect the profile conditions of the IPC/J-STD-020 standard for moisture sensitivity testing. These devices can safely withstand a maximum of three reflow passes at these conditions.

Profile Feature	Termination Finish			
1 Tome Teature	SnPb	100% Matte Sn		
Preheat/Soak				
Temperature Minimum (T <sub>Smin</sub> )	100°C	150°C		
Temperature Maximum (T <sub>Smax</sub> )	150°C	200°C		
Time ( $t_s$ ) from $T_{smin}$ to $T_{smax}$	60 - 120 seconds	60 - 120 seconds		
Ramp-Up Rate $(T_L \text{ to } T_p)$	3°C/second maximum	3°C/second maximum		
Liquidous Temperature (T <sub>L</sub> )	183°C	217°C		
Time Above Liquidous (t <sub>L</sub> )	60 - 150 seconds	60 - 150 seconds		
Peak Temperature (T <sub>P</sub> )	235°C	260°C		
Time Within 5°C of Maximum Peak Temperature (t <sub>p</sub> )	20 seconds maximum	30 seconds maximum		
Ramp-Down Rate (T <sub>p</sub> to T <sub>L</sub> )	6°C/second maximum	6°C/second maximum		
Time 25°C to Peak Temperature	6 minutes maximum	8 minutes maximum		

Note 1: All temperatures refer to the center of the package, measured on the capacitor body surface that is facing up during assembly reflow.

## Table 4 - Performance & Reliability: Test Methods and Conditions

Stress	Reference	Test or Inspection Method			
Terminal Strength	JIS-C-6429	Appendix 1, Note: Force of 1.8 kg for 60 seconds.			
Board Flex	JIS-C-6429	Appendix 2, Note: Standard termination system – 2.0 mm (minimum) for all except 3 mm for COG. Flexible termination system – 3.0 mm (minimum).			
		Magnification 50 X. Conditions:			
Caldarahility	J-STD-002	a) Method B, 4 hours at 155°C, dry heat at 235°C			
Solderability	J-51D-002	b) Method B at 215°C category 3			
		c) Method D, category 3 at 260°C			
Temperature Cycling	JESD22 Method JA-104	1,000 Cycles (-55°C to +125°C). Measurement at 24 hours +/-4 hours after test conclusion.			
Biased Humidity	MIL-STD-202 Method 103	Load Humidity: 1,000 hours 85°C/85% RH and rated voltage. Add 100 K ohm resistor.  Measurement at 24 hours +/-4 hours after test conclusion.  Low Volt Humidity: 1,000 hours 85°C/85% RH and 1.5 V. Add 100 K ohm resistor.  Measurement at 24 hours +/-4 hours after test conclusion.			
Moisture Resistance	MIL-STD-202 Method 106	t = 24 hours/cycle. Steps 7a and 7b not required. Measurement at 24 hours +/-4 hours after test conclusion.			
Thermal Shock	MIL-STD-202 Method 107	-55°C/+125°C. Note: Number of cycles required – 300, maximum transfer time – 20 seconds, dwell time – 15 minutes. Air – Air.			
High Temperature Life	MIL-STD-202 Method 108 /EIA-198	1,000 hours at 125°C (85°C for X5R, Z5U and Y5V) with 2 X rated voltage applied.			
Storage Life	MIL-STD-202 Method 108	150°C, 0 VDC for 1,000 hours.			
Vibration	MIL-STD-202 Method 204	5 g's for 20 minutes, 12 cycles each of 3 orientations. Note: Use 8" X 5" PCB 0.031" thick 7 secure points on one long side and 2 secure points at corners of opposite sides. Parts mounted within 2" from any secure point. Test from 10 – 2,000 Hz			
Mechanical Shock	MIL-STD-202 Method 213	Figure 1 of Method 213, Condition F.			
Resistance to Solvents	MIL-STD-202 Method 215	Add aqueous wash chemical, OKEM Clean or equivalent.			

# **Storage and Handling**

Ceramic chip capacitors should be stored in normal working environments. While the chips themselves are quite robust in other environments, solderability will be degraded by exposure to high temperatures, high humidity, corrosive atmospheres, and long term storage. In addition, packaging materials will be degraded by high temperature—reels may soften or warp and tape peel force may increase. KEMET recommends that maximum storage temperature not exceed 40°C and maximum storage humidity not exceed 70% relative humidity. Temperature fluctuations should be minimized to avoid condensation on the parts and atmospheres should be free of chlorine and sulfur bearing compounds. For optimized solderability chip stock should be used promptly, preferably within 1.5 years of receipt.

#### Construction

# **Capacitor Marking (Optional):**

Laser marking option is not available on:

- · COG, Ultra Stable X8R and Y5V dielectric devices
- EIA 0402 case size devices
- EIA 0603 case size devices with Flexible Termination option.
- · KPS Commercial and Automotive grade stacked devices.

These capacitors are supplied unmarked only.

#### **Tape & Reel Packaging Information**

KEMET offers multilayer ceramic chip capacitors packaged in 8, 12 and 16 mm tape on 7" and 13" reels in accordance with EIA Standard 481. This packaging system is compatible with all tape-fed automatic pick and place systems. See Table 2 for details on reeling quantities for commercial chips.

Table 5 - Carrier Tape Configuration, Embossed Plastic & Punched Paper (mm)

	Tape	Embosse	d Plastic	Punched Paper		
<b>EIA Case Size</b>	Size	7" Reel	13" Reel	7" Reel	13" Reel	
	(W)*	Pitch (P <sub>1</sub> )*		Pitch (P <sub>1</sub> )*		
01005 - 0402	8			2	2	
0603	8			2/4	2/4 -	
0805	8	4	4	4	4	
1206 - 1210	8	4	4	4	4	
1805 - 1808	12	4	4			
≥ 1812	12	8	8			
KPS 1210	12	8	8			
KPS 1812 and 2220	16	12	12			
Array 0612	8	4	4			

<sup>\*</sup>Refer to Figures 1 and 2 for W and  $P_1$  carrier tape reference locations.

New 2 mm Pitch Reel Uptions	•
-----------------------------	---

	Packaging Ordering Code (C-Spec)	Packaging Type/Options
•	C-3190	Automotive grade 7" reel unmarked
	C-3191	Automotive grade 13" reel unmarked
	C-7081	Commercial grade 7" reel unmarked
	C-7082	Commercial grade 13" reel unmarked

<sup>\* 2</sup> mm pitch reel only available for 0603 EIA case size. 2 mm pitch reel for 0805 EIA case size under development.

#### Benefits of Changing from 4 mm to 2 mm Pitching Spacing

- Lower placement costs.
- Double the parts on each reel results in fewer reel changes and increased efficiency.
- Fewer reels result in lower packaging, shipping and storage costs, reducing waste.

<sup>\*</sup>Refer to Tables 6 and 7 for tolerance specifications.

- 1. The embossment hole location shall be measured from the sprocket hole controlling the location of the embossment. Dimensions of the embossment location and the hole location shall be applied independently of each other.
- 2. The tape with or without components shall pass around R without damage (see Figure 6.)
- 3. If  $S_1 < 1.0$  mm, there may not be enough area for a cover tape to be properly applied (see EIA Standard 481, paragraph 4.3, section b.)
- 4. B, dimension is a reference dimension for tape feeder clearance only.
- 5. The cavity defined by  $A_{\alpha}$ ,  $B_{\alpha}$  and  $K_{\alpha}$  shall surround the component with sufficient clearance that:
  - (a) the component does not protrude above the top surface of the carrier tape.
  - (b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - (c) rotation of the component is limited to 20° maximum for 8 and 12 mm tapes and 10° maximum for 16 mm tapes (see Figure 3.)
  - (d) lateral movement of the component is restricted to 0.5 mm maximum for 8 and 12 mm wide tape and to 1.0 mm maximum for 16 mm tape (see Figure 4.)
  - (e) for KPS product,  $A_0$  and  $B_0$  are measured on a plane 0.3 mm above the bottom of the pocket.
  - (f) see addendum in EIA Standard 481 for standards relating to more precise taping requirements.

- 1. The cavity defined by  $A_{n}$ ,  $B_{n}$  and T shall surround the component with sufficient clearance that:
  - a) the component does not protrude beyond either surface of the carrier tape.
  - b) the component can be removed from the cavity in a vertical direction without mechanical restriction, after the top cover tape has been removed.
  - c) rotation of the component is limited to 20° maximum (see Figure 3.)
  - d) lateral movement of the component is restricted to 0.5 mm maximum (see Figure 4.)
  - e) see addendum in EIA Standard 481 for standards relating to more precise taping requirements.
- 2. The tape with or without components shall pass around R without damage (see Figure 6.)

## **Packaging Information Performance Notes**

1. Cover Tape Break Force: 1.0 kg minimum.

2. Cover Tape Peel Strength: The total peel strength of the cover tape from the carrier tape shall be:

Tape Width	Peel Strength		
8 mm	0.1 to 1.0 newton (10 to 100 gf)		
12 and 16 mm	0.1 to 1.3 newton (10 to 130 gf)		

The direction of the pull shall be opposite the direction of the carrier tape travel. The pull angle of the carrier tape shall be 165° to 180° from the plane of the carrier tape. During peeling, the carrier and/or cover tape shall be pulled at a velocity of 300 ±10 mm/minute.

**3. Labeling:** Bar code labeling (standard or custom) shall be on the side of the reel opposite the sprocket holes. *Refer to EIA Standards 556 and 624*.

#### **Disclaimer**

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
